For Immediate Release

RIPit® Computer Corporation And Sir Speedy® Sign Agreement

RIPit® Computer Corporation announced an agreement with Sir Speedy®, Inc. to provide complete Direct-to-Plate Systems as an option to new and existing Sir Speedy Franchisees. Sir Speedy's Research & Development evaluation on the product was that RIPit's OpenRIP® interpreter is easy to operate, simple to train, and connects to a Mac and PC in minutes.

The RIPit SpeedSetter® produces plates with half mil accuracy creating sharp clear screens and halftones. The system is available as In Line (integrated SpeedSetter and Plate Processor), or Off Line in portrait or landscape formats, to best suit your production needs. The familiarity of most shops using their camera for plates has made the transition to first generation digital output simpler and yields an unsurpassed quality printed product.

Chosen For Quality and Affordability

Sir Speedy, Inc. feels that RIPit's Direct-to-Plate Package is of high quality, provides a range of features and is an affordable alternative to traditional processes. The system offers a built-in monitor preview to check accuracy before printing, allowing for corrections, saving both time and material to the franchise. RIPit's Direct-to-Plate templating takes out all the guess work on plate workflow.

Karl Post, Assistant Vice President of Strategic Development for Sir Speedy Inc. notes, "Sir Speedy has tested and recommends the product to our Franchises who are considering the purchase of a Direct-to-Plate Package. This includes the existing franchise network and all new centers opened in 1999."

About RIPit® Computer Corporation

RIPit was founded in 1989 by Wayne Wasulko. RIPit is currently a major supplier of Direct-to-Plate systems for the quick print industry. We have grown our business around offering our technology to both franchise printers and independent printers. RIPit provides a very competitive and complete solution for printers that want to go full digital Direct-to-Plate. Wasulko states, "Our system gives the small to medium shop the ability to produce true 3000 dpi, and 175 lpi polyester plates, and film to 4000 dpi and 225lpi."
