

OpenRIP® Color

OpenRIP® Color drives a wide range of inkjet printers and plotters using RIPit's KOOLKolor™ inkjet screening technology for extremely accurate color reproduction. OpenRIP® Color is an Adobe® PostScript® 3™ RIP which interprets PostScript, EPS, and PDF files from most Mac and Windows applications. OpenRIP Color offers all the advanced features you need to take control of your workflow.

- ▶ **Monitor Preview** - Confirm page elements, fonts, colors, traps, knockouts, and overprints before you commit to media.
- ▶ **Advanced Color Proofing** - Print composite color or specific color builds for press proofs and customer approvals. Change spot colors at the RIP, reduce ink on any or all colors, and preview traps, overprints, and knockouts.
- ▶ **Custom Job Queues with Drag & Drop** - Customize RIP queues to match specific output devices, page and media sizes, color profiles and screening types. Queues appear as printers in the Chooser on Macintosh systems, and are set up as printers on Windows systems. At the RIP, drag & drop files to various queues to instantly change job settings.
- ▶ **RIPit Media** - The best value in inkjet media, RIPit's Neutral Yellow and Ultra White inkjet papers work especially well with OpenRIP Color.
- ▶ **Plus** - *Idiom Recognition, Job History, 136 Adobe® PostScript® 3™ Standard Fonts, and much, much more...*

OpenRIP® Color also offers these advanced features:

- ▶ **KOOLKolor™ Proofing** - Create attractive, color-accurate proofs on a variety of inkjet printers and plotters. KoolKOLOR™ uses industry-standard ICC Profiles.
- ▶ **KoolToning™ Halftone Simulator** - Now see traditional AM halftone dots and true rosettes on your inkjet proof.
- ▶ **AdvancedScan™** - Our Professional scan to plate and image manipulation software make it easy to handle paper based originals. Scan, clean up, add colors and tints, impose, generate pdf proofs and without leaving OpenRIP.
- ▶ **6 - Color Printer and Plotter Support** - Allows printing on the Epson Stylus Pro 5000 and 5500 inkjet printers and the Stylus Pro 7000/7500 and 9000/9500 plotters.

OpenRIP® Color Specifications

Optional Features:

- RIPit KOOLKolor™ Inkjet Proofing System
- RIPit KoolToning™ Halftone Simulator
- AdvancedScan™ Image Manipulation
- 6-color printer support
- Plotter support

System Hardware:

- OpenRIP® Color Raster Image Processor
 - Fast Pentium 4 Processor
 - Windows 2000® Professional
 - 40+ Gig hard drive, 256 MB Ram
 - Integrated video, audio, 10/100 ethernet
 - CD-RW ROM and 3.5" floppy drive
 - Dimensions: 5.5"W x 13"H x 13.25"D
- 17" Monitor, Mouse, and Keyboard

System Features:

- True Adobe® PostScript® 3™ Interpreter
- Direct PostScript, PDF and, EPS Printing
- Custom Job Queuing with drag & drop
- 136 Adobe® PostScript® 3™ Standard Fonts Package

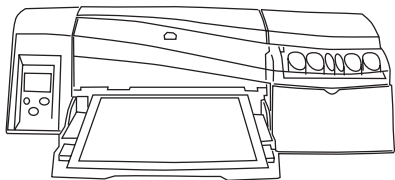

Proofing:

- Monitor Preview, with Trap Preview feature
- Supports monochrome, process color, and spot color files
- Accepts separated, composite, and In-RIP separation files
- Advanced Proofing Features:
 - Change spot colors on the printed proof
 - Print any combination of job colors
 - Reduce ink on any or all colors

Network:

- Queues appear as printers in the Chooser on the Macintosh
- Download EPS, PDF, and PS Files / Fonts
- Windows® 95/98/NT/ME/2000 Compliant Printer
- HotFolders feature for Windows workstations

OpenRIP® Color Supports

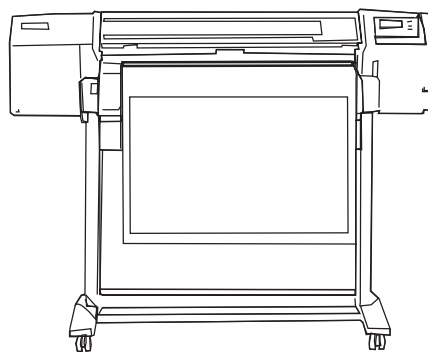

Color Printers

- Epson Stylus Color 1520 Parallel*
- Epson Stylus Color 3000 Parallel*
- Epson Stylus Pro 5000 Parallel*
- Epson Stylus Pro 5500 USB/Parallel*
- HP 10ps, 20ps and 50ps USB/Parallel*

*or connect through a print server

Plotters

- Epson Stylus Pro 7000, 7500, 7600, 9600 USB/Parallel*
- Epson Stylus Pro 9000,9500 Parallel*
- Epson Stylus Pro 10000, 10600 USB/Firewire*
- HP DesignJet 650/750 Parallel*
- HP DesignJet 2000/3000 Parallel*
- Encad Chroma 24 Parallel*
- Encad Novajet 1/2/3/4 Parallel*
- Encad Novajet Pro, ProE, Pro 50, Pro 600e . Parallel*
- Encad Novajet Pro 50, 500 Parallel*
- Encad Novajet 500, 630, 700 Parallel*

*or connect through a print server
